COURSE TITLE

SQL Basics: Data Retrieval - Single Table

CHAPTER TITLE

Retrieve data using numeric query (BETWEEN, IN, ORDER BY, LIMIT, OFFSET)

- 1** $<$, \leq , $>$, \geq are the basic numerical operators used in SQL.
- 2** You can also use AND, OR, BETWEEN, and IN to perform numerical queries.
- 3** You can sort the table by using the 'ORDER BY' clause.
- 4** By default, it sorts the data in ascending order but you can specify the sort order.
- 5** LIMIT clause can be used to fetch the top 'N' or bottom 'N' amount of records. 'N' can be any numerical value.
- 6** OFFSET clause will help you to skip a certain number of rows in your final result.
